## **SECRETARY BYSIEWICZ DEMONSTRATES NEW VOTING TECHNOLOGY FOR TORRINGTON ELECTION OFFICIALS**

*Shows how new machines work, answers questions of elections officials*

TORRINGTON – Secretary of the State Susan Bysiewicz today demonstrated new optical scan voting technology for elections officials at Torrington City Hall, showing local election officials the type of voting machines that will serve as replacements for all of Connecticut's lever voting machines by 2007. Additionally, some towns will be able to use the optical scan machines for this November's elections, Secretary Bysiewicz said.

Secretary Bysiewicz was joined by officials from LHS Associates, the company chosen earlier this month by the state to provide optical scan voting machines for Connecticut cities and towns. Optical scan voting technology, in which a voter fills out a paper ballot and then scans it into a machine for verification, is the most common form of voting technology in America today, with more than half of the counties in America voting on optical scan machines. Optical scan technology also provides a paper trail for every vote case, in compliance with state law and the federal Help America Vote Act.

Today's visit to Torrington is the fourth of eighteen scheduled regional visits throughout Connecticut to meet with local elections officials, demonstrate the new technology for them, and answer any questions they may have, Secretary Bysiewicz said.

"As our office considered potential new technologies, the principles of security, accessibility and reliability guided our decision making. We chose LHS Associates' optical scan technical because this company provides a level of security needed to ensure the short-term and long-term integrity of our elections," Secretary Bysiewicz. "Much like filling out a standardized test or even a lottery ticket, the practice of filling out an optical scan ballot is something with which most people are familiar. The machines will ultimately replace our lever voting machines; this year, some towns throughout the

state will be able to receive them for the November election, and LHS will replace all of our lever machines by the November 2007 election.

"Federal funds will cover the \$15.7 million cost of purchasing the new machines and providing the proper training for elections officials," Secretary Bysiewicz added. "We will work closely with Registrars and Town Clerks to ensure that people receive the education and on-the-job training they need."

Secretary Bysiewicz also discussed the state's decision to sign a one-year contract with IVS, LLC, a company that will provide Connecticut telephone-based voting equipment which for the first time in seventy years will allow those citizens with disabilities to vote privately and independently. The state will use federal funds to provide the IVS technology, telephones, fax machines, and secure telephone lines at all 769 of Connecticut's voting precincts for this November's election.

Mayor Ryan Bingham said, "I am excited about the potential to incorporate modern technology which will make it easier for citizens, especially those who are disabled, to exercise their right to vote."

State Senator Andrew Roraback (R-Goshen), who Secretary Bysiewicz has credited for his invaluable assistance in the process of finding new voting technology, said, "While I and many of the towns I represent are disappointed that federal law appears to require that we abandon lever voting machines, which have served us so well for so long, I am pleased that this resolution will not impose unwanted and unfunded mandates on local communities. I thank all who have contributed to bringing closure to an issue which has consumed a great deal of time and attention."

"This visit is definitely very helpful," Democratic Registrar of Voters John Ciesco said. "This is something we've all been looking forward to, something that will assure us that we're all well-versed and have a good understanding. We are anxious to be educated and to share it with the voting public."
